

Weigh-In-Motion Detection and Load Spectrum Analysis

**Southeastern Pavement Management and
Design Conference**

Nashville, Tennessee

**Mark P. Gardner, P.E.
Weng On Tam, Ph.D, P.E.**

OVERVIEW

- **WIM Systems**
- **Successful WIM Implementation**
- **Axle Load Spectra**

WEIGHT-IN-MOTION

“the *process of measuring dynamic tire forces of a moving vehicle and estimating the corresponding tire loads of the static vehicle*”

- ASTM E 1318-02

ASTM E 1318-02

- **Purpose-to aid the user and vendor in specifying, purchasing, installing and testing a WIM system.**
- **Requires User to provide smooth, durable pavement structure, in good condition.**
- **Trucks should be moving at constant speed in their travel lanes when crossing the sensors.**

ASTM WIM CLASSIFICATION

WIM System	Speed Range	Application	Number of Lanes
Type I	16 – 130 km/h (10 – 80 mph)	Traffic Data Collection	Up to 4
Type II	16 – 130 km/h (10 – 80 mph)	Traffic Data Collection	Up to 4
Type III	16 – 130 km/h (10 – 80 mph)	Weight Enforcement	Up to 2
Type IV	3 – 16 km/h (2 – 10 mph)	Weight Enforcement	Up to 2

TYPES OF WIM EQUIPMENT

- **Piezoelectric Sensors**
- **Bending Plate Scale**
- **Deep Pit Load Cell**

PIEZOELECTRIC SENSORS

BENDING PLATE

Typical
Bending Plate
Installation

- 1 PAT bending plates
175 or 125 cm
- 2 Fastening rails
- 3 Mounting frame
- 4 Drainage pit

LOAD CELL

DP 121 Weigh-in-Motion Technology

COST COMPARISON

WIM System	% GVW Error – Highway Speeds	Initial Cost *	Maintenance Cost **
Piezoelectric Sensor	+/- 10%	\$9,500	\$4,224
Bending Plate Scale	+/- 5%	\$18,900	\$4,990
Double Bending Plate Scale	+/- (3 - 5)%	\$35,700	\$7,709
Deep Pit Load Cell	+/- 3%	\$52,500	\$7,296

*Estimated initial cost per lane (equipment and installation)

** Estimated average cost per lane (12-year life span including maintenance)

SELECTING WIM EQUIPMENT

- “Site Design Life”
 - Type of Equipment
 - Site Location and Condition
 - Installation of Equipment
- Intended Use of Data
 - Data Analyses
 - Accuracy and Precision

SITE SELECTION

- **Geometric Design**
 - Horizontal Curvature
 - Roadway Grade
 - Cross Slope
 - Lane Width
- **Pavement Condition**
 - Smoothness
 - Deflection
- **Site Location**
 - Power & Phone
 - Drainage
 - Traffic

SYSTEM CALIBRATION

- **Operation Check**
 - **Initial Calibration**
 - **Continuous Operations Check**
- **Fine Tuning/Recalibration**

MINNESOTA EXAMPLE

- **Automatic Recalibration**
 - **Front Axle of VC 9 Trucks**
 - **Adjustment Factors**
 - **Calibration Correction Factor**

QUALITY ASSURANCE

- **Vehicle Counts**
- **Vehicle Classification**
- **Weight-In-Motion**
 - **Gross Vehicle Weight**
 - **Axle Weight and Spacing**
- **AVC and WIM Volume and Class Comparison**

CALTRANS EXAMPLE

- “Knowledge of Site Characteristics” Review
- “Real Time” Review
- First Level Data Review
 - Summary Report
 - Individual Truck Report

CALTRANS EXAMPLE

- **Second Level Data Review**
 - **WIM Analysis Program**
 - **Determine Calibration Adjustments**

Site Maintenance

- **WIM Sensor Operation**
- **Loop Operation**
- **WIM Electronics and Equipment**
- **System Maintenance & Cleaning**
- **Visual Inspection of Site**
- **Software Maintenance**

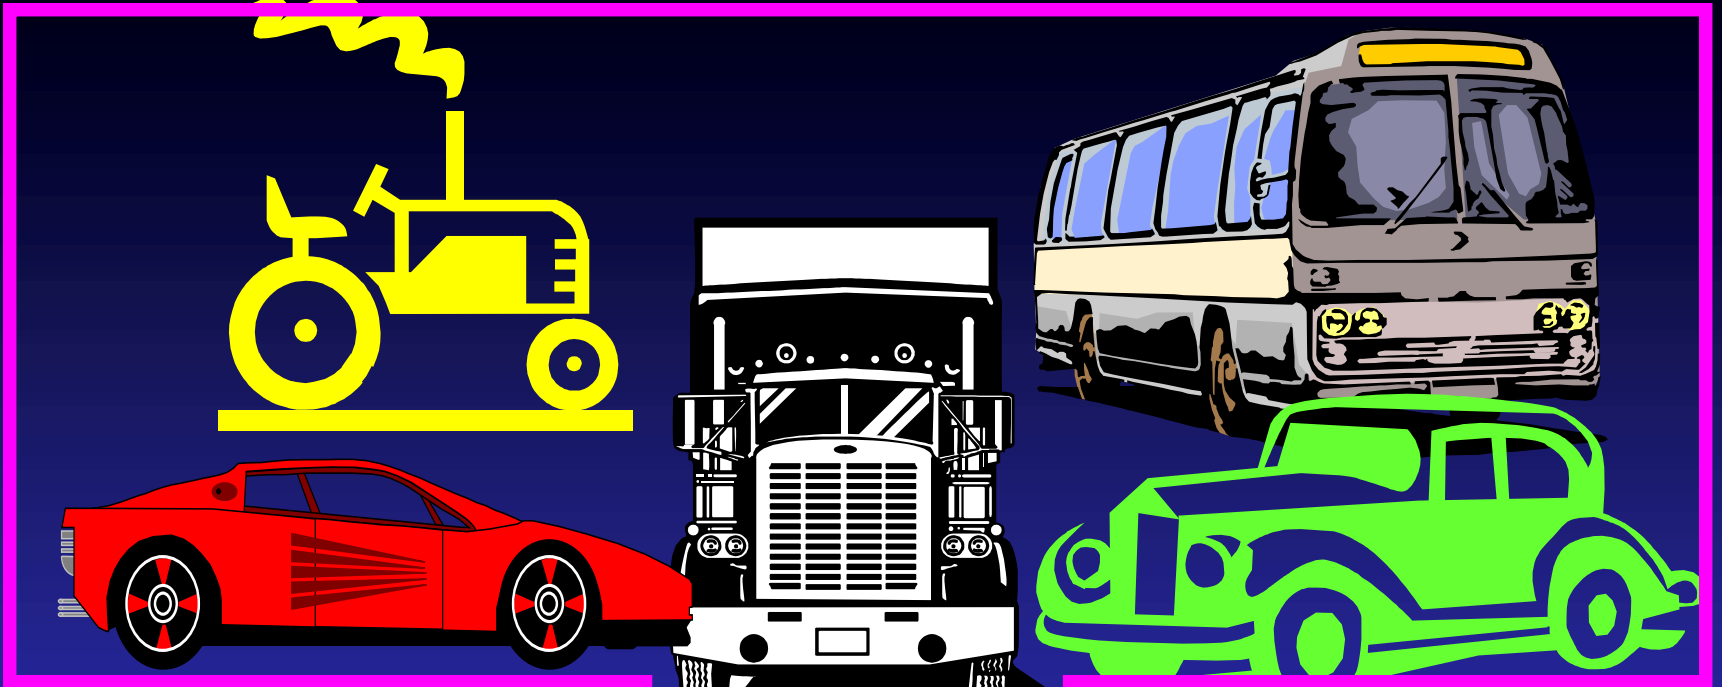

ESALS

TRAFFIC – 1993 GUIDE

- **Truck Equivalency Factors (TEF)**
- **Equivalent Single Axle Loads (ESALs)**

TRUCK EQUIVALENCY FACTOR

AC PAVEMENT
(SN=5, $P_t = 2.5$)

36^k

tandem

LEF = 1.38

36 k

tandem

LEF = 1.38

8^k

single

LEF = 0.34

GROSS
WEIGHT = 80^k

$$TF = 1.38 + 1.38 + 0.34 = 3.10 \text{ ESALS/TRUCK}$$

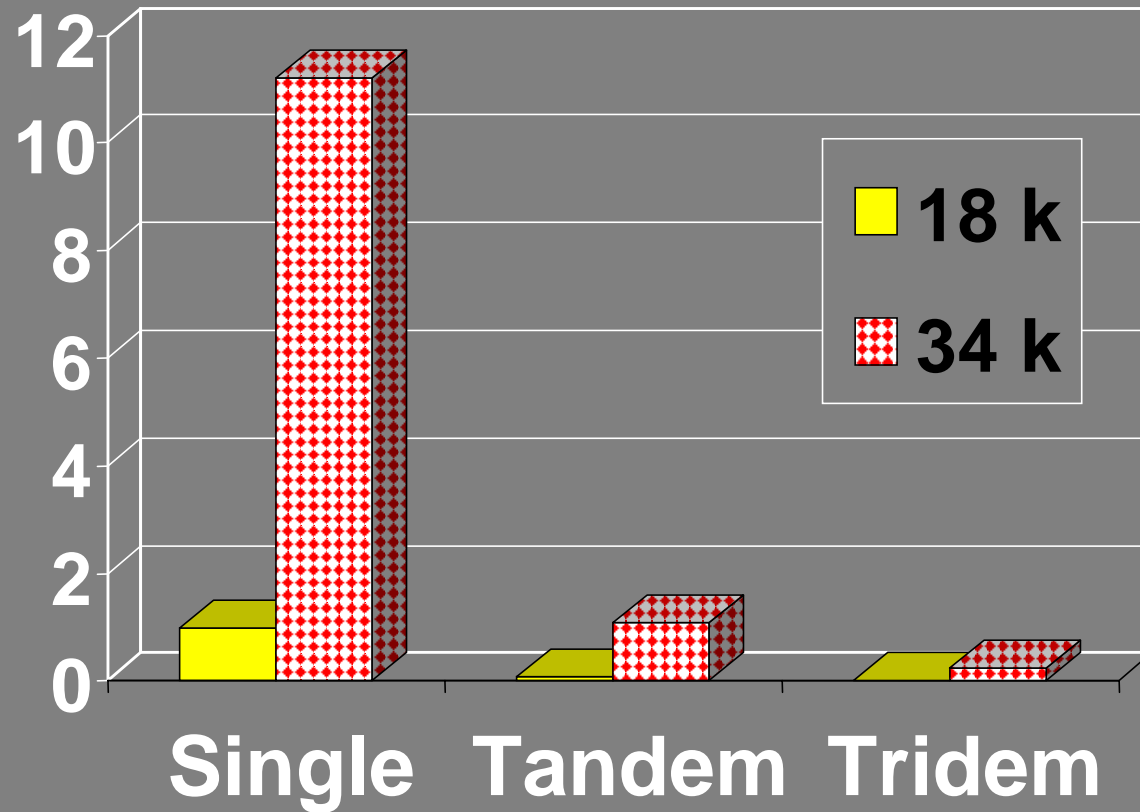

TRUCK EQUIVALENCY FACTORS

- TEF
 - Pavement Type
 - Flexible & Rigid
 - Structural Number (SN)
 - Terminal Serviceability (P_t)

TEF – Flexible

$SN = 5$ & $P_t = 2.5$

AXLE LOAD SPECTRA

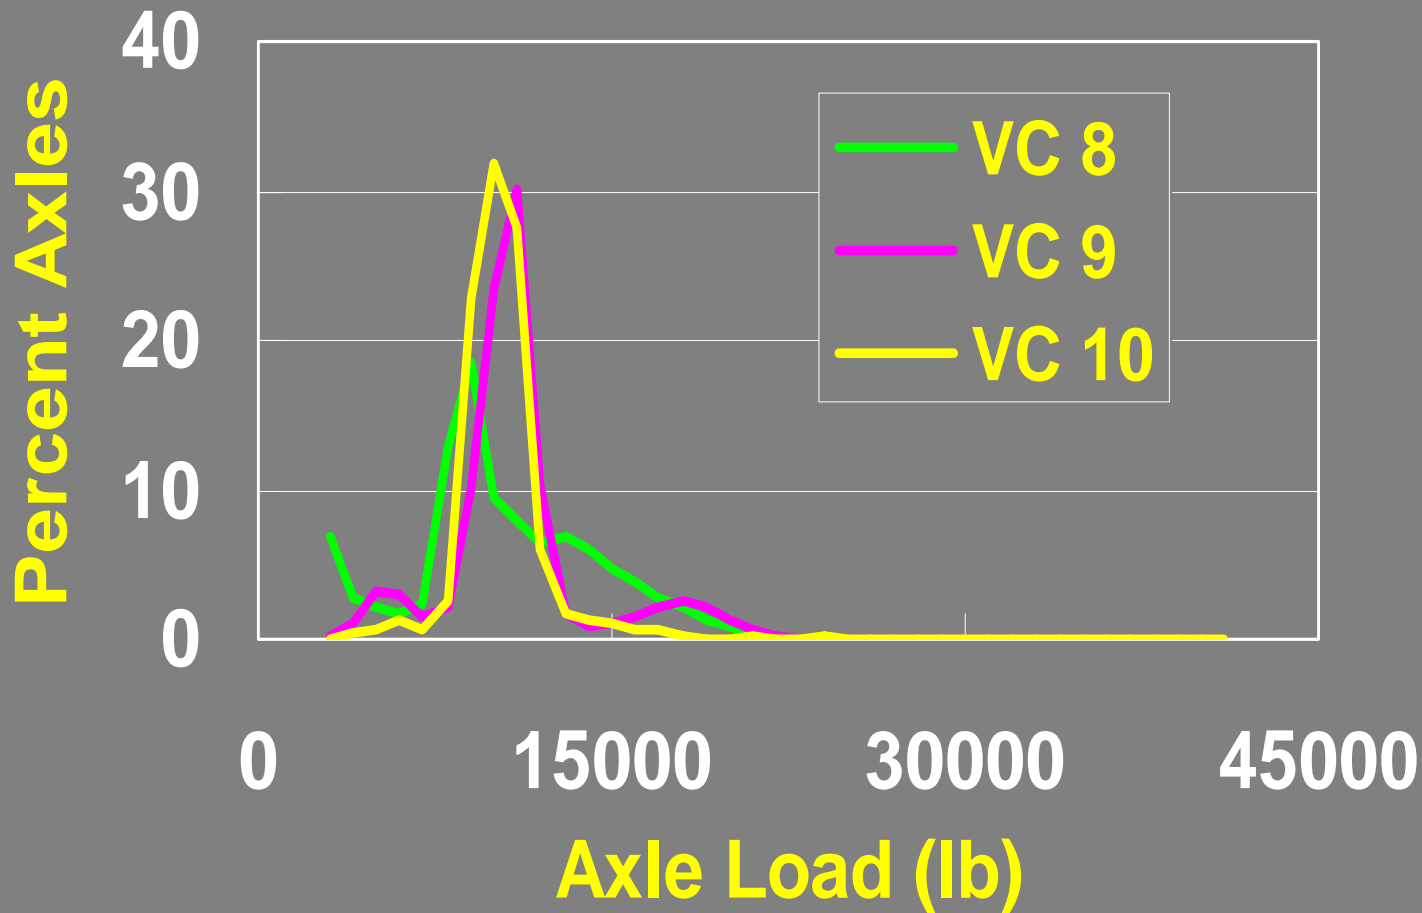

MECHANISTIC DESIGN

- ESALs Not Adequate
- Requires Axle Load Spectra
 - Same data source
 - Additional Processing

SINGLE AXLE

CUMULATIVE AXLE LOAD

WIM DATA COLLECTION

- **Good News**
 - Already collected in your state
- **Bad News**
 - May not analyze/summarize it in the format needed
- **NCHRP 1-39 software will help you with this analysis (but will not do it all)**

NCHRP 1-39 SOFTWARE

- **Take data already collected**
- **Help organize and summarize it**
- **Input it into the NCHRP 1-37A software**

NCHRP 1-39 SOFTWARE

- **Edit-Checked Short-term Site-Specific classification data**
- **Edit-checked Permanent Class Data**
- **Quality Checked WIM data**
- **User defined data groups**

WHAT'S NEEDED?

- Resources to:
 - Collect data
 - Quality assure data
 - Analyze data
 - Summarize data
 - Report and make data available

NCHRP 1-39 DESIGN “LEVELS”

	Understanding of Traffic	Classification Data	Weight Data
Level 1	Good	Continuous at Site	Site Specific
Level 2	Modest	Site Specific, but Short	Regional Average
Level 3	Poor	No Actual Class Data	Statewide Average

Work with Traffic Data Collection Folks Early

**In order to get the data collected at
your locations in time for you to use
it...**

CONCLUSIONS

- **There are various types of WIM equipment**
- **WIM data is required for M-E design**
- **WIM data can be successfully collected**
- **States already collect WIM data**
- **Additional analyses and formatting may be required**
