### PASSFlex for Integration of Asphalt Mix Design, Pavement Design, and Performance-Related Specifications

### Y. Richard Kim Jimmy D. Clark Distinguished University Professor North Carolina State University

Presented at the 2019 Southeastern States Pavement Conference Louisville, KY

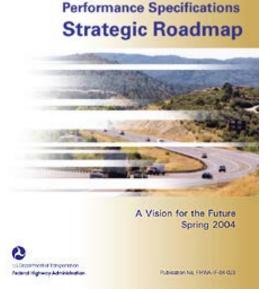

October 10, 2019

### Outline

- What is PASSFlex?
- Test Methods, Models, and Software Programs
- Performance-Engineered Mix Design
- Performance-Related Specifications
- Concluding Remarks

Performance Specifications Strategic Roadmap: A Vision for the Future *Federal Highway Administration* (2004)

- Vision: The performance of highway facilities will improve through better translation of design intent and performance requirements into construction specifications.
- Mission: To establish performance specifications as a viable contract option.
- "Freedom to innovate with accountability to deliver is the driving force behind the performance specification movement." - Ted Ferragut, TDC Partners, Ltd

### What is PASSFlex?

- System of "tools" for asphalt mix design, pavement design, and performance-related specifications
  - Test methods using Asphalt Mixture Performance Tester (AMPT)
  - Mechanistic models
  - Software programs
- Based on fundamental engineering principles
  - Seamless integration of mix design, pavement design, and PRS
  - Efficient testing to cover a wide range of loading and environmental conditions

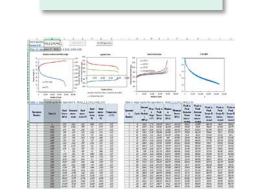

### **Distresses Covered**

- Fatigue cracking (bottom-up and topdown)
- Thermal cracking
- Rutting
- Aging

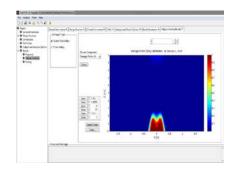

### PASSFlex

**FlexMAT**<sup>™</sup>

**FlexPAVE<sup>™</sup>** 

**FlexMIX** 

Mixture Testing System Mixture Analysis Program Pavement Performance Analysis Program

### **AMPT Test Methods**

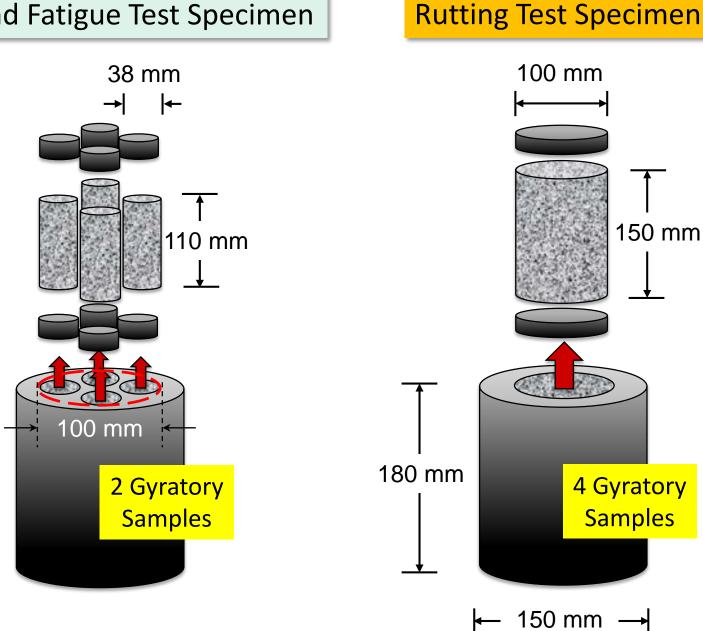

### Asphalt Mixture Performance Tester

### AMPT Performance Testing Suite

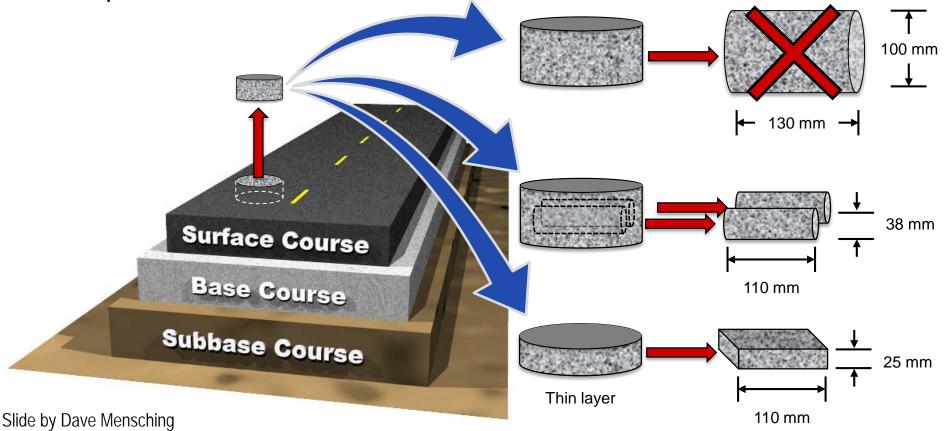

Test Method	AASHTO Spec.	Specimen Geometry	Material Properties	Index Parameter	Required Testing Time
Dynamic Modulus Test	PP 99/TP 132	38 mm D, 110 mm H	E* , phase angle, t-T shift factor	N/A	8 hrs
Cyclic Fatigue Test	PP 99/TP 133	38 mm D, 110 mm H	Damage characteristic curve, D <sup>R</sup> failure criterion	S <sub>app</sub>	5 hrs
Stress Sweep Rutting Test	TP 134	100 mm D, 150 mm H	Shift model coefficients	ATR	8 hrs

#### E\* and Fatigue Test Specimen

### 38 mm Specimen from Field Cores

- Asphalt concrete layers are generally thinner than 100 mm
- Allow for performance testing individual layers of as-built pavement

### **FlexPAVE**<sup>TM</sup>

### FlexPAVE<sup>TM</sup> ver 1.1

### Field Validation

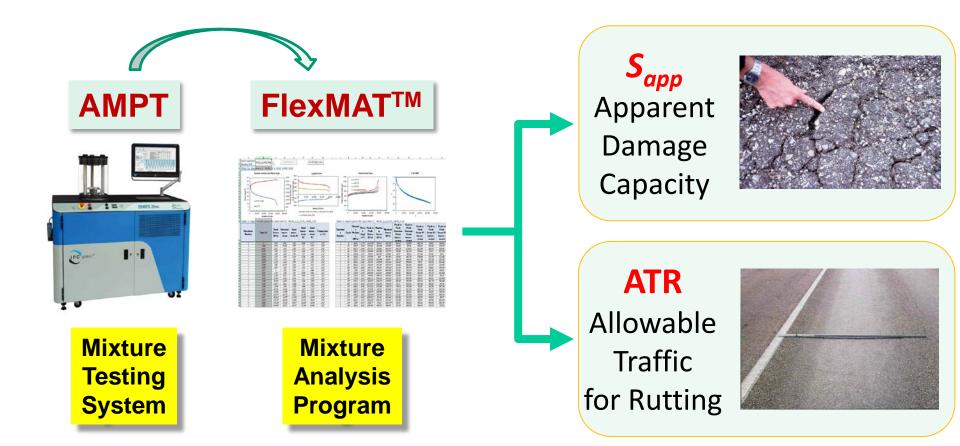

### Performance-Engineered Mix Design

### Index-based PEMD

- Use index parameters to pass/reject volumetric mix design
- Predictive PEMD
  - Use predicted life to optimize aggregate gradation and asphalt content for the design air voids
  - Use performance-volumetric relationship (PVR) developed from 'four corners' of volumetric space
  - Developed PVR can be used to develop pay tables in PRS.

### **Index Parameters**

# Thresholds of *S*<sub>app</sub>

Traffic (million ESALs)	Sapp Limits	Tier	Designation
Less than 10	$S_{app} > 8$	Standard	S
Between 10 and 30	$S_{app} > 24$	Heavy	Н
Greater than 30	<i>S<sub>app</sub></i> > 30	Very Heavy	V
Greater than 30 and slow traffic	<i>S<sub>app</sub></i> > 36	Extremely Heavy	E

### Thresholds of ATR

Traffic (million ESALs)	Tier	Designation
Less than 2	Light	L
Between 2 and 10	Standard	S
Between 10 and 30	Heavy	Н
Greater than 30	Very Heavy	V
Greater than 30 and slow traffic	Extremely Heavy	E

### Shadow Project

- Two-day AMPT hands-on training workshop at NCSU
- On-site training at the shadow agency's lab
- Proficiency testing
- Mix design using PEMD
- Development of life tables using PVR
- Collection of construction mix samples
- Comparison of PEMD-based PVR and PVR developed from construction samples
- Shadow PRS application

### PRS Shadow Projects - USA

### **Concluding Remarks**

- PASSFlex is a system of test methods, mechanistic models, and software programs.
- PASSFlex allows the integration of mix design, pavement design, and PRS.
- □ FlexMAT<sup>TM</sup>, FlexPAVE<sup>TM</sup>, and FlexMIX are available upon request.
- Southeastern states are welcome to participate in the shadow project!
